R&D Activities (Jan. 1, 2009 – Feb. 3, 2010)

As for clinical development activities in Japan, the Company saw progress as described below:

Oncology

- In September 2009, we obtained approval for an additional indication of RG340 (product name: Xeloda), a 5-FU derivative, for colorectal cancer, as a combination therapy with oxaliplatin.
- In August 2009, we participated in a multinational Phase III study (expected indication: glioblastoma) conducted by Roche and started a domestic Phase II trial (expected indication: glioblastoma [relapsed]) for a humanized anti-VEGF monoclonal antibody RG435 (product name: Avastin). Also for RG435, we filed an application for an additional indication (expected indication: breast cancer) in October and obtained approval for an additional indication (expected indication: non-small cell lung cancer).
- In September 2009, we filed an application for an EGFR tyrosine kinase inhibitor, RG1415 (product name: Tarceva, expected indication: pancreatic cancer).
- In November 2009, we filed an application for a recombinant human erythropoietin EPOCH (product name: Epogin, expected indication: treatment of chemotherapy-induced anemia).
- In July 2009, we participated in a multinational Phase III study (expected indication: breast cancer) conducted by Roche for RG1273, a humanized HER dimerization inhibitory monoclonal antibody.
- In September 2009, we started a Phase I/II trial (expected indication: pancreatic cancer) for a humanized anti-human IL-6 receptor monoclonal antibody, MRA (product name: Actemra).
- In November 2009, we started a Phase I trial (expected indication: solid tumors) for a MEK inhibitor, CIF (RG7167).
- In January 2010, we started a Phase I trial (expected indication: solid tumors) for CKI27 (RG7304).
- In October 2009, we started a Phase I trial (expected indication: breast cancer) for a HER2 antibody-drug conjugate, RG3502.
- We decided to terminate development of RG744 for chemotherapy-induced anemia after reviewing priorities of our projects.
- We decided to terminate development for a human anti-IGF-1R monoclonal antibody RG1507 (expected indication: solid tumors) following the fact that results from overseas Phase II clinical trials conducted by Roche (target indication: non-small cell lung cancer, sarcoma) did not meet the efficacy criteria to proceed. No safety or tolerability signals were observed.

Bone and Joint Diseases

- In January 2009, we started Phase I/II clinical trials for a new formulation (subcutaneous injection) of a humanized anti-human IL-6 receptor monoclonal antibody, MRA (product name: Actemra).
- In October 2009, we filed an application for an activated Vitamin D₃ derivative, ED-71 (expected indication: osteoporosis).

Renal Diseases

- In April 2009, we obtained approval for the partial change of the API manufacturing method and the pharmaceutical formulation of a recombinant human erythropoietin (product name: Epogin).
- In July 2009, we filed an application for a continuous erythropoietin receptor activator, RG744 (expected indication: renal anemia).

Transplant, Immunology and Infectious Diseases

- In August 2009, we started a Phase I trial (expected indication: chronic hepatitis C) for a thiazolidine compound, NTZ.

Other Diseases

- In February 2009, we started a multinational Phase II study (expected indication: type II diabetes) for an SGLT2 inhibitor, CSG452 (RG7201).

- In July 2009, we started a Phase II trial (expected indication: type II diabetes) for a GLP-1 analogue, RG1583 (ITM-077).
- In July 2009, we started a Phase I trial (expected indication: Alzheimer's disease) for a human anti-amyloid-beta monoclonal antibody, RG1450.

At present, we are awaiting the approval of applications (new molecular entities or additions of indications) filed for 6 development themes, including RG435 (expected indication: breast cancer).

Also, as for development activities overseas, the Company saw progress as described below.

- In October 2009, we started a Phase II trial (expected indication: gastric cancer, etc) for a topoisomerase I inhibitor, TP300.
- In March 2009, we concluded a license agreement with ChoongWae Pharma Corporation to grant rights to develop and market a humanized anti-human IL-6 receptor monoclonal antibody, MRA (planned product name: Actemra), in South Korea for the indication of rheumatoid arthritis.
- In January 2010, Roche obtained approval for a humanized anti-human IL-6 receptor monoclonal antibody, MRA (product name: Actemra), for rheumatoid arthritis from the U.S. Food & Drug Administration (FDA).

We deleted the following projects from our development pipeline with due consideration for priorities: a humanized anti-human IL-6 receptor monoclonal antibody, MRA (expected indication: multiple myeloma, Crohn's disease, Castleman's disease [overseas], Systemic lupus erythematosus (SLE)), a motilin agonist GM-611 (expected indication: diabetic gastroparesis, irritable bowel syndrome (IBS)), a DPP-IV inhibitor RG1579 (expected indication: type II diabetes).
